

Project Lifecycle

Legal Innovation Lab Wales | September 22, 2021 | v0.9

Key: Who's Involved with each step?

- ◆ Stakeholders
- ◆ Academics
- ◆ Project Team
- ◆ Dev Team

Research

Answer the Five Ws about the idea.

Build up background information about the problem, the idea and the market. Who, What, Where, When, Why.

See our [Five Ws](#) document for more detailed information.

Feature Discussion

What does your idea need to do?

Create an initial list of features that the idea needs. The dev team will be on hand to discuss this with you in more detail.

See our [Features](#) document for more info and some examples.

For each of the features, the dev team will estimate the technical complexity and how long it would take to complete.

Development Cycle

Build and test a prototype. Development happens in 6 week cycles, working on features in incremental steps with reviews and testing throughout the process.

See our [Software Development](#) article for further details.

Idea

A need is identified and an idea of a solution forms.

Ideas come from a range of stakeholders: Our Team, the School of Law, Business Partners or the wider community.

Project Evaluation

Legal Innovation Lab Wales project team evaluate the idea to determine whether it is something that the lab could develop and whether lab is the best placed to support it.

Prototype Planning

The dev team and subject area experts will expand the feature requirements into a more technical specification and outline the shape and feel of the initial phase of development.

The dev team will create an initial design for the infrastructure, database, application and front end.

Testing & Launch

Once the team is happy with a prototype, go back to the stakeholders and showcase what has been created.
